The analysis was run for the AM peak, PM peak, and off peak hours.

D16.1.3 Construction activity is to be limited to one lane in each direction of the roadway at a time. No construction shall commence on a subsequent adjacent lane until the asphalt works are complete on the first lane. E2. PROTECTION OF EXISTING TREES

E2.1 The Contractor shall take the following precautionary steps to prevent damage from construction activities to existing boulevard trees within the limits of the construction area:

- (a) The Contractor shall not stockpile materials and soil or park vehicles and equipment on boulevards within 2 metres of trees.
- (b) Trees identified to be at risk by the Contract Administrator are to be strapped with 25 x 100 x 2400mm wood planks, or suitably protected as approved by the Contract Administrator.
- (c) Excavation shall be performed in a manner that minimizes damage to the existing root systems. Where possible, excavation shall be carried out such that the edge of the excavation shall be a minimum of 1.5 times the diameter (measured in inches), with the outcome read in feet, from the closest edge of the trunk. Where roots must be cut to facilitate excavation, they shall be pruned neatly at the face of excavation.
- (d) Operation of equipment within the dripline of the trees shall be kept to the minimum required to perform the work required. Equipment shall not be parked, repaired, refuelled; construction materials shall not be stored, and earth materials shall not be stockpiled within the driplines of trees. The dripline of a tree shall be considered to be the ground surface

directly beneath the tips of its outermost branches. The Contractor shall ensure that the operations do not cause flooding or sediment deposition on areas where trees are located.

- (e) Work on-site shall be carried out in such a manner so as to minimize damage to existing tree branches. Where damage to branches does occur, they shall be neatly pruned.

E2.2 All damage to existing trees caused by the Contractor's activities shall be repaired to the requirements and satisfaction of the Contract Administrator and the City Forester or his designate.

E2.3 No separate measurement or payment will be made for the protection of trees.

E2.4 Elm trees cannot be trimmed between April 1 and July 31, inclusive.

E3. TRAFFIC CONTROL

E3.1 Further to clauses 3.6 and 3.7 of CW 1130-R1:

- (a) Where directed, the Contractor shall construct and maintain temporary asphalt ramps to alleviate vertical pavement obstructions such as manholes and planing drop-offs to the satisfaction of the Contract Administrator. No measurement for payment will be made for this work.
- (b) In accordance with the Manual of Temporary Traffic Control, the Contractor ("Agency" in the manual) shall make arrangements with the Traffic Services Section of the City of Winnipeg to place all temporary regulatory signs. The Contractor shall bear all costs associated with the placement of temporary traffic control devices by the Traffic Services Section of the City of Winnipeg in connection with the works undertaken by the Contractor.

E4. TRAFFIC MANAGEMENT

E4.1 Generally, this project has been designed to asphalt resurface the mainline lanes of Pembina Highway where significant rutting has occurred. Resurfacing of medians and side street approaches has been purposely minimized to speed construction and reduce delays to the public. Concrete repair work is also minimal. To that end, sequencing of the work by the Contractor should also be designed to minimize delays.

E4.2 Traffic analysis on Pembina Highway within the project limits shows that the Level of Service for traffic drops to unacceptable levels (level F) if more than one lane in each direction is closed to traffic for construction at any time. The analysis was run for the AM peak, PM peak, and off peak hours.

E4.3 The contractor is responsible for supplying and installing all signage in accordance with the Manual of Temporary Traffic Control in Work Areas on City Streets, 2003 Edition.

E4.4 Further to clause 3.7 of CW 1130-R1:

E4.4.1 Maintain a minimum of two through lanes of traffic northbound and two lanes of traffic southbound at all times, except for short term, short length closures such as when construction traffic is entering/exiting the traffic lanes.

E4.4.2 At the northbound left turn lanes at the McGillivray intersection, an additional lane to accommodate the left turn storage lane shall be maintained at all times.

E4.4.3 Where left turn lanes exist at other locations within the project area, construction on the median lane must allow for access to the median opening.

- E4.4.4 Median openings, intersections, and private approaches open to traffic unless joint/slab repairs or planing/paving operation require temporary closure. Temporary closures to be staggered such that consecutive intersections are not closed at the same time.
- E4.4.5 Should the Contractor be unable to maintain pedestrian or vehicular access to a residence or business, he shall review the planned disruption with the business or residence and the Contract Administrator, and take reasonable measures to minimize the impact. The Contractor shall provide a minimum of 24 hours notification to the affected residence or business and the Contract Administrator, prior to disruption of access.
- E4.4.6 Cross streets, private approaches, and median openings may be temporarily closed for short periods during the asphalt placement and compaction works to allow for mainline grade control devices and asphalt compaction. Contractor to minimize temporary closures by “stringing” short sections, and taking down “stringline” as soon as the asphalt mat has been rolled and is safe for cross street travel.
- E4.4.7 Flagpersons may be necessary to maintain the flow of traffic during certain work operations.
- E4.4.8 Pedestrian access must be maintained on one side of Pembina Highway at all times.
- E4.4.9 Ambulance/emergency vehicle access must be maintained at all times.
- E4.4.10 Refer to D14.2 for traffic management at the Chevrier intersection in preparation for the Manitoba Marathon on June 18, 2006.

E5. WATER USED BY CONTRACTOR

- E5.1 Further to clause 3.7 of CW 1120-R1, the Contractor shall pay for all costs associated with obtaining water in accordance with the Waterworks By-law. Sewer charges will not be assessed for water obtained from a hydrant.

E6. PARTIAL-DEPTH PATCHING OF EXISTING JOINTS

E6.1 Description

E6.1.1 General

- (a) Partial Depth Joint Patching – The planing of concrete pavement along a joint to the specified depth and width and filling the planed area with asphalt.
- (b) This specification shall cover all operations relating to Partial-Depth Patching of Existing Joints.

E6.1.2 Referenced Standard Construction Specifications

- (a) CW 3230 – Full-Depth Patching of Existing Slabs and Joints
- (b) CW 3410 – Asphaltic Concrete Pavement Works
- (c) CW 3450 – Planing of Pavement

E6.2 Materials

E6.2.1 Asphalt Materials

- (a) Type IA asphalt material as per CW 3410, Clause 5 and 6.
- (b) Equipment as per CW 3410, Clause 8 and CW 3450, Clause 3.

E6.3 Construction Methods

- E6.3.1 Concrete joints identified for partial-depth patching shall be planed from 400 mm to 600 mm wide on each side of the joint, or as specified by the Contract Administrator. The finished edges of the planed sections shall be constructed with a minimum 20 mm cut to eliminate feathering of the asphaltic concrete fill material. The depth of the planing along the centre line of the joint shall be a minimum of 50 mm and a maximum of 65 mm into the concrete pavement so as to remove any ravelled concrete. Areas planed beyond the horizontal limits specified shall not be measured for payment. Where the joint is over planed to a depth greater than 65 mm, the joint, for the full width or length of the slab shall be renewed in accordance with CW 3230 as a full-depth joint repair but at the cost of the specified partial-depth joint patch.
- E6.3.2 Dispose of material in accordance with Section 3.4 of CW 1130.
- E6.3.3 Immediately prior to placing asphalt in the patch, the planed joint must be dry and shall be blown clean of all loose material and debris. A uniform application of tack coat shall be applied sufficiently to wet the concrete pavement surface on which the asphalt will be placed.
- E6.3.4 The planed joint area shall then have a lift of asphalt hand placed to be flush with the surrounding pavement surface in accordance with Clause 9.3 of CW 3410.
- E6.3.5 Immediately following the placement of the asphalt, it shall be compacted with a vibratory plate compactor or a walk behind vibratory roller compactor.
- E6.3.6 No traffic or construction equipment shall be allowed over the joint until the asphalt has cooled to atmospheric temperature.

E6.4 Measurement and Payment

E6.4.1 Partial-Depth Patching of Existing Joints

- (a) Partial Depth Patching of Existing Joints will be measured on an area basis and paid for at the Contract Unit Price per square metre for the "Items of Work" listed below. E7. ASPHALT PATCHING OVER FULL DEPTH CONCRETE REPAIRS

E7.1 Description

E7.1.1 General

- (a) This specification covers placing asphalt over full depth concrete repairs to match the grade of the remaining adjacent asphalt overlay prior to placing the final asphalt overlay. The patching is necessary to prevent transverse rutting from sudden depth changes where the existing overlay is removed over a concrete repair.

E7.1.2 Referenced Standard Construction Specifications

- (a) CW 3410 – Asphaltic Concrete Pavement Works.
(b) CW 3450 – Planing of Pavement.

E7.3.2 Place tack coat in patch area by hand, hand sprayer, or broom as necessary in accordance with Clause 9.2 of CW 3410.

E7.3.3 Place and compact using mechanical rollers. Place the asphalt material to a compacted depth matching the top of the existing asphalt overlay. Compact to an average of 95% percent of the 75 Blow Marshall Density of the paving mixture with no individual test being less than 90% percent.

E7.4 Measurement and Payment

E7.4.1 Asphalt Patching over Full Depth Concrete Repairs

- (a) Asphalt Patching over Full Depth Concrete Repairs will be measured on a weight basis and paid for at the Contract Unit Price per tonne for "Asphalt Patching over Full Depth Concrete Repairs". The weight to be paid for will be the total number of tonnes of asphalt placed and compacted in accordance with this specification, as measured on a certified weigh scale, and accepted by the Contract Administrator.
