E3.3 The Contractor must not damage the existing granular underground drainage system and must protect the same, when crossing over the granular drains. Presently the drains are protected with a 19mm dia. thick plywood layer, covered with a 150 mm depth of clay fill.

E3.4 The Contractor must not damage any existing sod on the surrounding soccer fields, and shall not allow any vehicles or materials onto those areas. The Contractor is made aware the remaining soccer fields will be utilized for play, while they are reconstructing field No: 5. E4. EXISTING STOCKPILED FILL MATERIAL

E4.1 Fill was deposited on field No: 5 in the year 2006. This fill was rough graded and levelled out that in late Fall of 2006, and the existing grade information shown on drawing detail 2-L1, reflect the most current survey information.

E4.2 The Contractor is further made aware, the City of Winnipeg is proposing to haul clay fill and stockpile it south of the baseball complex near the Assiniboine River.

E4.3 The Contractor may use the stockpiled fill by the Assiniboine River, at no cost, in order to achieve the new grade elevations. The Contractor may also deposit surplus fill from field No: 5, onto the City fill stockpile site, subject to a location approved by the Contract Administrator.

E5. EXISTING FIELD NO: 5 SURFACING AND CONDITIONS

E5.1 Soccer field No. 5, within the Work area shown in detail 2-L2 consists of two major surface materials: 1. mounded clay fill in the centre portion of the site, and 2. the existing grass covered, relatively flat area, around the perimeter of the field area. The grass covering within a 10 metre distance of the outside of the field perimeter is to be sheared off and legally disposed of off site. The topsoil below the grass area may be used for soil fill, however it shall not be used as imported topsoil directly below the new sod.

E5.2 The soccer field is surrounded on the east and west sides by the underground granular drainage channel, which is to be protected. A one metre width of sod alongside the west drainage channel, and a two metre width of sod alongside the east drainage channel is also to be retained and protected.

E5.3 'The two existing soccer goal posts are to be relocated, immediately north and south of the play field areas. The Contractor shall remove the anchor pins and reinstall the goal posts off field, in a diagonal orientation, to prevent premature soccer play..

E5.4 Around the perimeter of the soccer field are approximately twenty boulders, 600 mm diameter and smaller, laying on the surface of the grass. These boulders are to be legally disposed of off site.

E5.5 Along the east side of the play field is a row of quick coupler irrigation valve boxes. These valves are to be utilized for watering the new grass and the Contractor is to protect the plastic valve box covers and associated equipment.

E5.6 At the northeast corner of the site, there are two Spruce trees which are approx. 6 metres height. These trees are to be removed complete with the trunk to 300 mm below finish grade.

E5.7 Removal of the existing weed covering, relocation of the two soccer goal posts, removal of two Spruce trees and approx. twenty boulders is to be included in Unit Price No: 1 "Earthwork and Rough Grading".

E6. REMOVAL OF EXISTING PERIMETER SOD LAYER

- E6.2 Where sod is to be removed, it shall be mowed to a 25 mm height, and the top 25 mm of grass and roots sheared off, and legally disposed off site. Bidders shall review photos on drawing L-2 for determining the nature of Work required. The remaining root system is to be rototilled, and then spread out in to a maximum 50 mm depth layer though out areas requiring fill and compacted prior to placing additional fill or topsoil on top of it.
- E6.3 The existing sod which is located more than 10 metres from the outside of the perimeter field, is to be rototilled or an approved method of breaking it up, prior to installing the new fill and topsoil.
- E6.4 Removal of the existing sod layer is to be included in Unit Price No: 1 "Earthwork and Rough Grading".

All unsuitable materials of whatever nature encountered shall be excavated, removed and disposed of by the Contractor to the satisfaction of the Contract Administrator. Where design grades are not shown, the new surface materials shall be installed to meet flush with surrounding grades, and sloped so as not to impede the existing drainage pattern.
- E7.5 Construction to the new design grades shall be accomplished by the excavation of material from high areas (around perimeter edge), and using the suitable excavated material along with imported clean earth fill for filling in the low areas as indicated by the elevations shown on Construction Drawings. Backfill shall be placed in a dry, thawed condition and shall be maintained free of moisture or frost.
- E7.6 The perimeter area along the outside edges of the field, as defined by the heavy broken line shown on drawing detail 2-L1 shall be cut with a vertical shearing operation, such as using a sharp spade or edger, to create a clean and definite line for the new sod to abut flush to.
- E7.7 The design gradient for all other areas shall be considered to be straight grade between the finished design elevations shown. Changes in grade at swales or where it meets existing sod to remain shall be gently contoured as directed by the Contract Administrator to provide future ease of grass mowing operations.
- E7.8 In fill areas where the difference between the existing ground elevation and the new finished design elevation is less than 300 mm, the Contractor shall scarify the existing ground to a minimum depth of 50 mm prior to placement of any fill.

- E7.9 Should the Contractor require additional fill they may utilize the fill from the City stockpile site, located south of the baseball complex, by the Assiniboine River. The finished surface of all disturbed areas shall be dragged and smoothed in such a manner that there are no loose soil particles greater than 50 mm in maximum dimensions.

- E8.3 Further to CW 3510-R9, Item 9.6 Watering and Rolling, the Contractor is informed they may use the manual irrigation system for establishing the sod; however, depending on the river water levels, the City cannot guarantee when the system will be operable. The City will not be held responsible for any equipment failures with regards to operation of the irrigation pumps and equipment.
- E8.4 Should the river irrigation system not be in operation when the sod is to be laid, the Contractor shall hold off installing the sod until the irrigation system is operable. The Contract Administrator must be notified of any delays, due to the irrigation system not being operable, so the delay in time is not counted in the total number of Working days allocated.
