1.0 Introduction

This report summarizes the results of the sub-surface investigation completed for the proposed 2012 City of Winnipeg Regional Street Renewal (PW File #: 12-RL-01) of Fort Street between Graham Avenue and Portage Avenue. Information regarding the concrete, asphalt, road base for the existing road, and the soil stratigraphy beneath the pavement structure is provided.

2.0 Sub-Surface Investigation and Laboratory Program

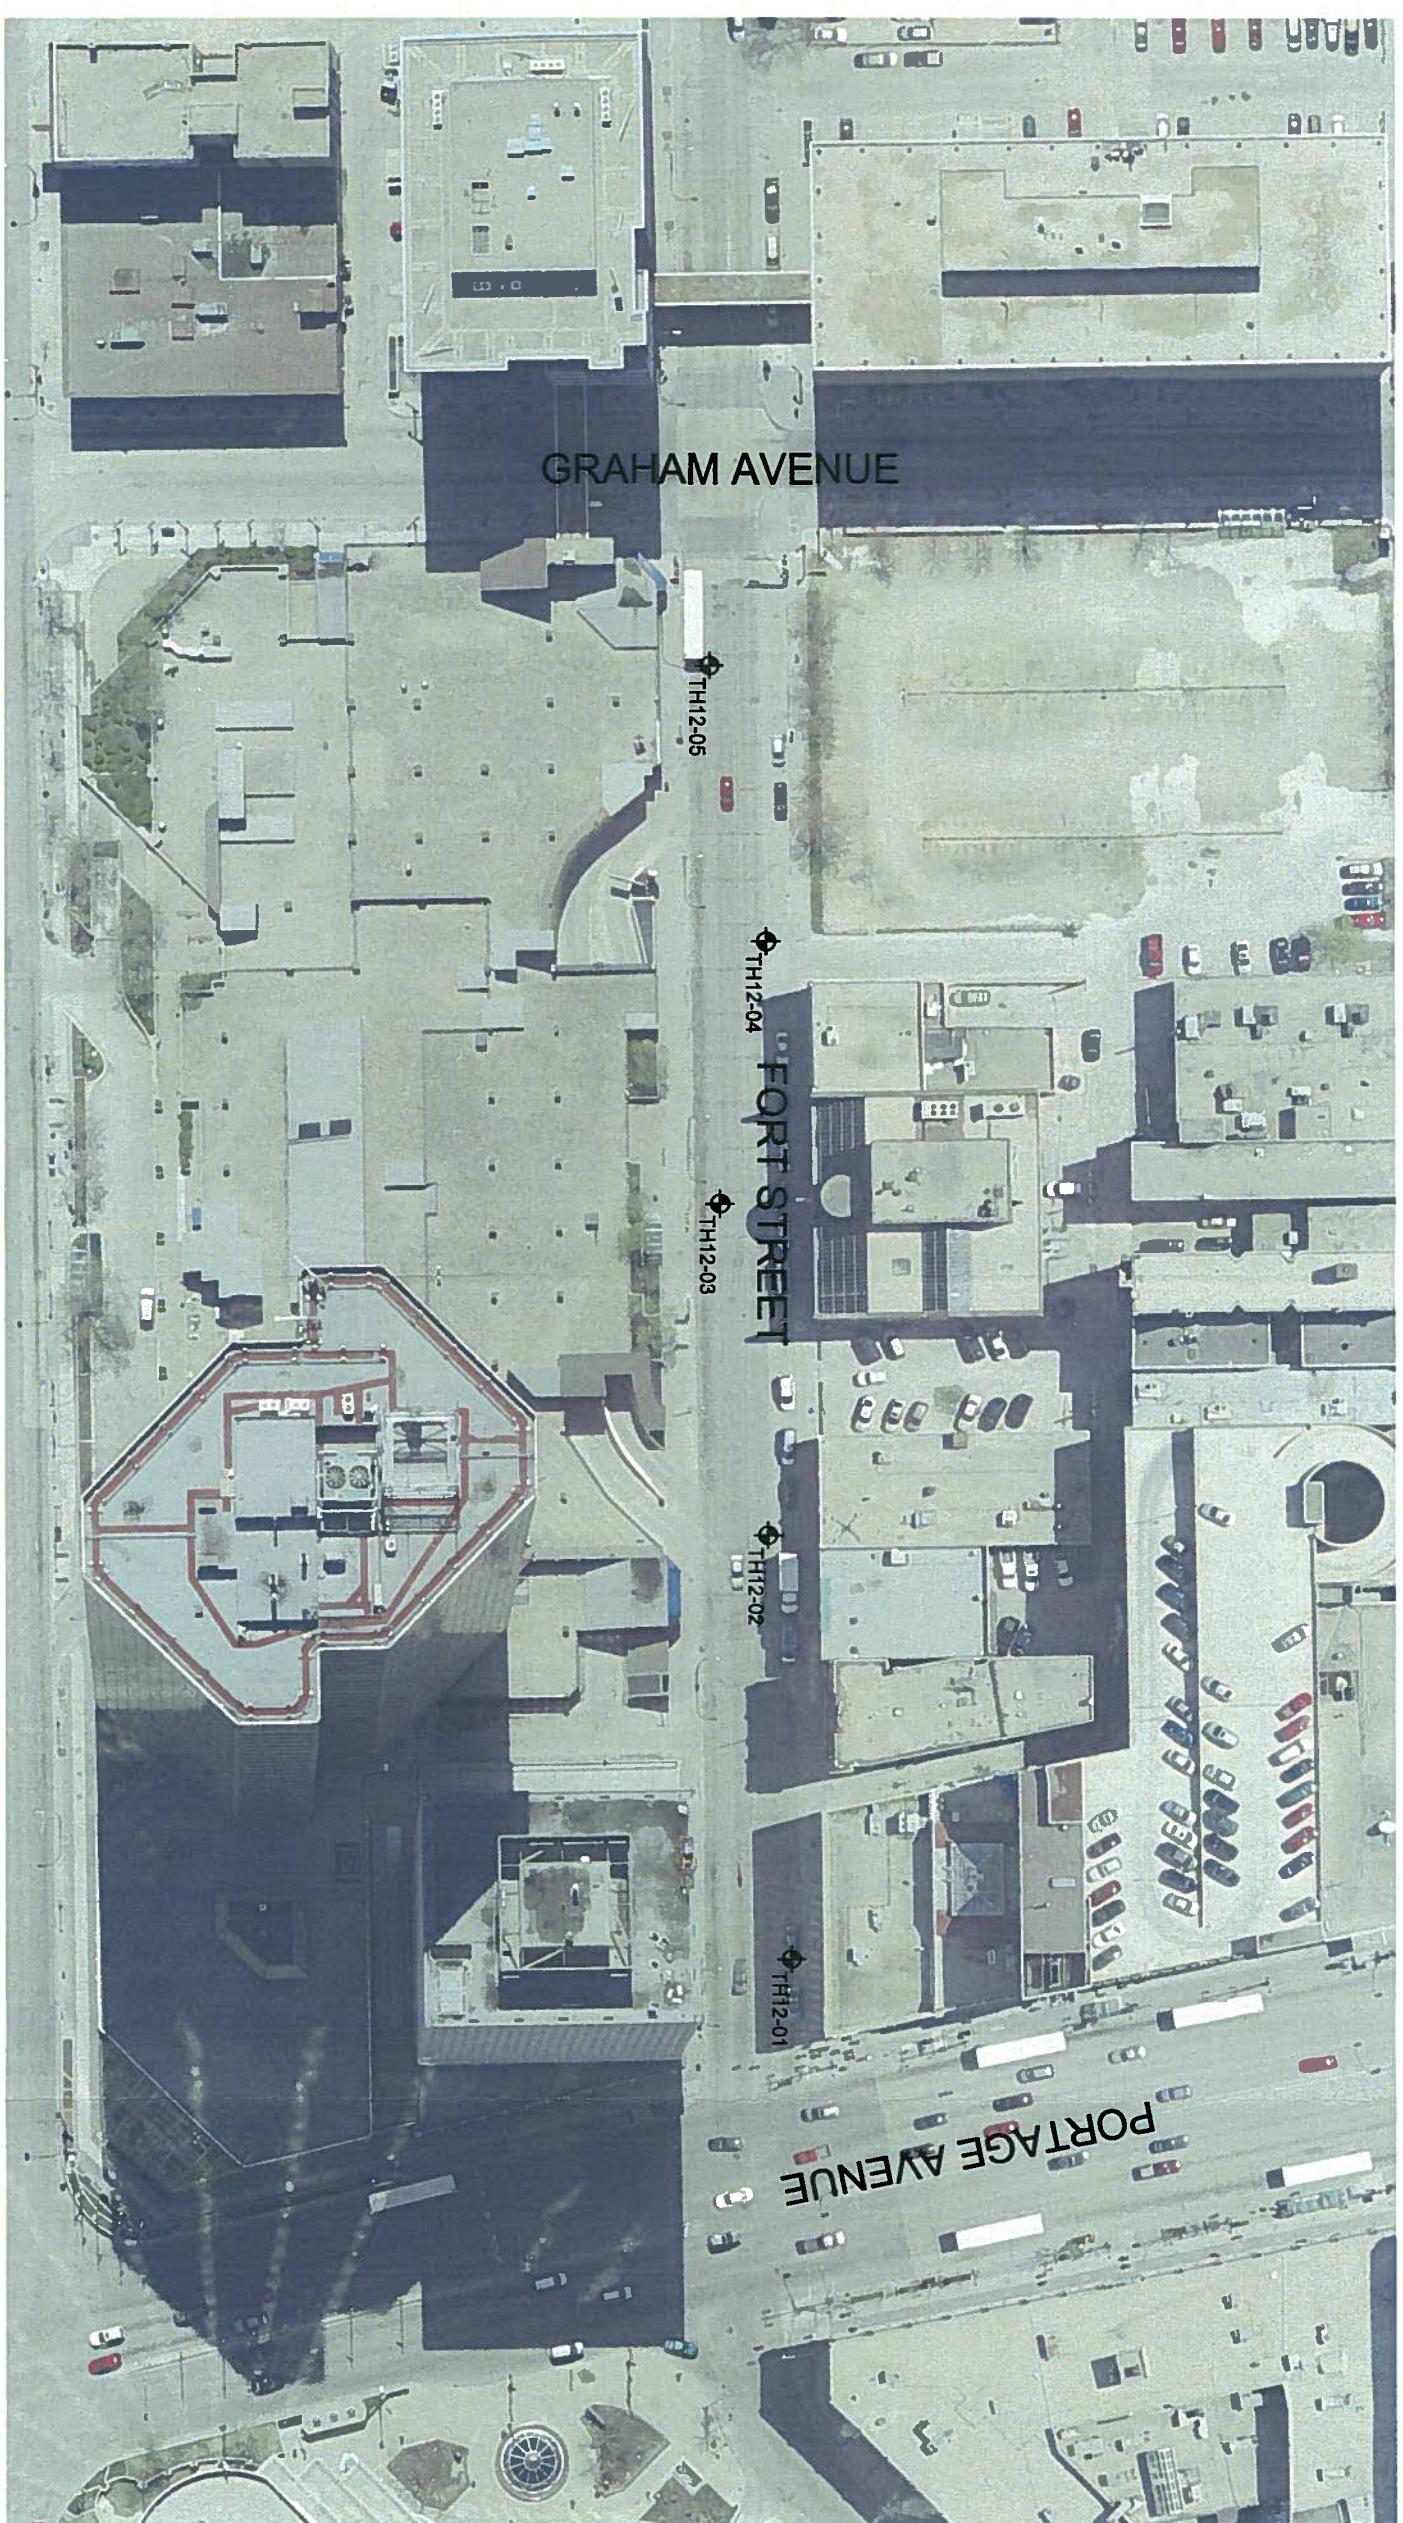

A total of 5 test holes were drilled on Fort Street from Graham Avenue to Portage Avenue at the locations shown on Figure 01. The test holes were drilled in order to determine sub-surface conditions for design and reconstruction of the road segment.

The sub-surface investigation was conducted on March 28, 2012. The test holes were drilled to a depth of 3.1 m below road surface by Paddock Drilling Ltd. using their MP8 truck mounted drill rig equipped with 125 mm diameter solid stem augers. The pavement structure (asphalt or concrete) was cored by Quality Coring using a portable coring press equipped with a hollow 150 mm diameter diamond core drill bit. The sub-surface conditions were observed during drilling and visually classified by Stephen Renner of TREK Geotechnical Inc. (TREK). Other pertinent information such as groundwater and drilling conditions were also recorded during the drilling investigation. Disturbed (auger cuttings) samples retrieved during the sub-surface investigation were transported to TREK's material testing laboratory for further testing. Core samples were also retrieved and logged at TREK's material testing laboratory.

The laboratory testing program consisted of moisture content determination, Atterberg limits, and grain size analysis (mechanical sieve and hydrometer methods). The results of the laboratory testing are included on the test hole logs in Appendix A. The laboratory testing results are also summarized and reported separately in Appendix B. Photos of the concrete and asphalt cores are included in Appendix C.

Test hole locations noted on the test hole logs and shown on Figure 01 are based on measured distances from the nearest curb and monument (i.e. light post, fire hydrant, catch basin, etc.).

EXPLANATION OF FIELD AND LABORATORY TESTING

GENERAL NOTES

- Classifications are based on the United Soil Classification System and include consistency, moisture, and color. Field descriptions have been modified to reflect results of laboratory tests where deemed appropriate.
- Descriptions on these test hole logs apply only at the specific test hole locations and at the time the test holes were drilled. Variability of soil and groundwater conditions may exist between test hole locations.
- When the following classification terms are used in this report or test hole logs, the primary and secondary soil fractions may be visually estimated.

Major Divisions		USCS Classification	Symbols	Typical Names	Laboratory Classification Criteria		ASTM Sieve sizes	
Coarse-Grained soils (More than half the material is larger than No. 200 sieve size)	Sands (More than half of coarse fraction is larger than 4.75 mm)	GW		Well-graded gravels, gravel-sand mixtures, little or no fines	$C_u = \frac{D_{\infty}}{D_{10}}$ greater than 4; $C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 and 3	Not meeting all gradation requirements for GW		
		GP		Poorly-graded gravels, gravel-sand mixtures, little or no fines	Atterberg limits below "A" line or P.I. less than 4		#10 to #4 #40 to #10 #200 to #40 < #200	
		GM		Silty gravels, gravel-sand-silt mixtures	Atterberg limits above "A" line or P.I. greater than 7			
		GC		Clayey gravels, gravel-sand-silt mixtures	$C_u = \frac{D_{\infty}}{D_{10}}$ greater than 6; $C_c = \frac{(D_{30})^2}{D_{10} \times D_{60}}$ between 1 and 3	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols		
		SW		Well-graded sands, gravelly sands, little or no fines	Not meeting all gradation requirements for SW			
	Sands with fines (Appreciable amount of fines)	SP		Poorly-graded sands, gravelly sands, little or no fines	Atterberg limits below "A" line or P.I. less than 4		#10 to #4 #40 to #10 #200 to #40 < #200	
		SM		Silty sands, sand-silt mixtures	Atterberg limits above "A" line or P.I. greater than 7			
		SC		Clayey sands, sand-clay mixtures	Above "A" line with P.I. between 4 and 7 are borderline cases requiring use of dual symbols			
		ML		Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity	Atterberg limits below "A" line or P.I. less than 4			
		CL		Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays	Atterberg limits above "A" line or P.I. greater than 7			
Fine-Grained soils (More than half the material is smaller than No. 200 sieve size)	Silts and Clays (Liquid limit less than 50)	OL		Organic silts and organic silty clays of low plasticity	Plasticity Chart		Particle Size mm	
		MH		Inorganic silts, micaceous or distomaceous fine sandy or silty soils, organic silts				
		CH		Inorganic clays of high plasticity, fat clays	C _L C _H C _I CL ML OL CH MH OR OH			
		OH		Organic clays of medium to high plasticity, organic silts	LIQUID LIMIT (%)			
		Pt		Peat and other highly organic soils	Von Post Classification Limit	Strong colour or odour, and often fibrous texture		
	Highly Organic Soils (Liquid limit greater than 50)	Material		ASTM Sieve Sizes		Material		
		Boulders	> 300	> 12 in.	Sand	Sand	2.00 to 4.75	
		Cobbles	75 to 300	3 in. to 12 in.	Coarse	Coarse	#10 to #4	
		Gravel	19 to 75	3/4 in. to 3 in.	Medium	Medium	#40 to #10	
		Coarse	4.75 to 19	#4 to 3/4 in.	Fine	Fine	#200 to #40	
		Fill			Silt or Clay	Silt or Clay	< #200	

* Borderline classifications used for soils possessing characteristics of two groups are designated by combinations of group symbols.
For example, GW-GC, well-graded gravel-sand mixture with clay binder.

Other Symbol Types

	Asphalt		Bedrock (undifferentiated)		Cobbles
	Concrete		Limestone Bedrock		Boulders and Cobbles
	Fill		Cemented Shale		Silt Till
			Non-Cemented Shale		Clay Till

EXPLANATION OF FIELD AND LABORATORY TESTING

LEGEND OF ABBREVIATIONS AND SYMBOLS

LL	- Liquid Limit (%)	▽ Water Level at Time of Drilling
PL	- Plastic Limit (%)	▼ Water Level at End of Drilling
PI	- Plasticity Index (%)	■ Water Level After Drilling as Indicated on Test Hole Logs
MC	- Moisture Content (%)	
SPT	- Standard Penetration Test	
RQD	- Rock Quality Designation	
Qu	- Unconfined Compression	
Su	- Undrained Shear Strength	
VW	- Vibrating Wire Piezometer	
SI	- Slope Inclinometer	

FRACTION OF SECONDARY SOIL CONSTITUENTS ARE BASED ON THE FOLLOWING TERMINOLOGY

TERM	EXAMPLES	PERCENTAGE
and	and CLAY	35 to 50 percent
"y" or "ey"	clayey, silty	20 to 35 percent
some	some silt	10 to 20 percent
trace	trace gravel	1 to 10 percent

TERMS DESCRIBING CONSISTENCY OR COMPACTION CONDITION

The Standard Penetration Test blow count (N) of a non-cohesive soil can be related to compactness condition as follows:

<u>Descriptive Terms</u>	<u>SPT (N) (Blows/300 mm)</u>
Very loose	< 4
Loose	4 to 10
Compact	10 to 30
Dense	30 to 50
Very dense	> 50

The Standard Penetration Test blow count (N) of a cohesive soil can be related to its consistency as follows:

<u>Descriptive Terms</u>	<u>SPT (N) (Blows/300 mm)</u>
Very soft	< 2
Soft	2 to 4
Firm	4 to 8
Stiff	8 to 15
Very stiff	15 to 30
Hard	> 30

The undrained shear strength (Su) of a cohesive soil can be related to its consistency as follows:

<u>Descriptive Terms</u>	<u>Undrained Shear Strength (kPa)</u>
Very soft	< 12
Soft	12 to 25
Firm	25 to 50
Stiff	50 to 100
Very stiff	100 to 200
Hard	> 200
