1 INTRODUCTION

A geotechnical investigation was conducted by WSP Canada Inc. for the proposed 2017 Local Street Renewals Package 17-R-06 in Winnipeg, Manitoba. Five streets were cored and drilled including Aikins Street from Carruthers Avenue to McAdam Avenue, Aikins Street from Redwood Avenue to Mountain Avenue, Hartford Avenue from McGregor Street to CPR Winnipeg Beach, Leamen Crescent from Pipeline Road to Doubleday Drive, and Powers Street from Smithfield Avenue to Enniskillen Avenue. One street, Alisp Drive from Tallman Street to Lucas Avenue was only cored. The purpose of this investigation was to assess the general subsurface conditions with respect to identifying the existing pavement structure and the underlying soil profile.

2 SUB-SURFACE INVESTIGATION AND TESTING

The field investigation was undertaken on March 22, 2017 and was completed on March 24, 2017. A total of 21 test holes and 26 cores were completed by Maple Leaf Drilling. The test holes were drilled to a depth of 3.05 m below the road surface using a truck-mounted CME 55 rig equipped with a 125 mm auger. The pavement was cored using a 150 mm diameter coring press. All test holes were backfilled with auger cuttings and bentonite and capped with cold mix asphalt after the completion of the drilling. Test hole locations are noted on the test hole logs and are shown on the maps included in Appendix A.

The soils encountered were visually classified to the full extent of the test hole. Representative soil samples were recovered at regular intervals, every 0.3 m to 2.1 m as well as one sample at 3.0 m. All of the soil samples were tested for their moisture contents and selected soil samples (one per street) were submitted for grain size analysis. The pavement cores were measured for their thickness and each core was photographed, if intact. Any groundwater seepage and sloughing encountered in the test holes were noted.

Detailed descriptions of the soil profiles for each test hole are included on the logs in Appendix B. The material test results are included in Appendix C. The photos of the pavement cores are included in Appendix D.

3 CLOSURE

The findings and recommendations provided in this report were prepared by WSP Canada Inc. (the Consultant) in accordance with generally accepted professional engineering principles and practices. The recommendations are based on the results of field and laboratory investigations and are reflective only of the actual test hole(s) and/or excavation(s) examined. If conditions encountered during construction appear to be different than those shown by the test hole(s) and/or excavation(s) at this site, the Consultant should be notified immediately in order that the recommendations can be reviewed and modified as necessary to address actual site conditions.

This report is limited in scope to only those items that are specifically referenced in this report. There may be existing conditions that were not recorded in this report. Such conditions were not apparent to the

Consultant due to the limitations imposed by the scope of work. The Consultant, therefore, accepts no liability for any costs incurred by the Client for subsequent discovery, manifestation or rectification of such conditions.

This report is intended solely for the Client named as a general indication of the visible or reported physical condition of the items addressed in the report at the time of the geotechnical investigation. The material in this report reflects the Consultant's best judgment in light of the information available to it at the time of preparation.

This report and the information and data contained herein are to be treated as confidential and may be used only by the Client and its officers and employees in relation to the specific project that it was prepared for. Any use a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. The Consultant accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

The report has been written to be read in its entirety, do not use any part of this report as a separate entity.

All files, notes, source data, test results and master files are retained by the Consultant and remain the property of the Consultant.
