D3. BACKGROUND

D3.1 The City of Winnipeg's water distribution system is comprised of water mains and feeder mains of varying pipe material, size, and age. For the water mains, the accepted level of service is based on a given number of breaks in a past five-year period, with the more critical water mains being proactively renewed prior to reaching this threshold. Water main replacements are also conducted on an opportunistic basis, such as during street reconstruction projects, to ensure holistic right of way asset management.

D3.2 The feeder mains, which were substantially installed in the 1950's and 1960's, are high criticality assets due to their consequence of failure, and a proactive assessment approach is required to understand pipe condition and remaining service life. This can be achieved through a condition assessment program.

D3.3 The total length of the City's feeder main infrastructure is approximately 152 km. Results from this risk assessment will generate a priority list for detailed condition assessment projects. Data from future condition assessment projects will assist in refining the risk matrix of the high criticality mains.

D3.4 In addition to the feeder mains, approximately 17 km of large diameter water mains (350mm diameter and larger) are considered critical mains and will be included in this risk assessment.

D3.5 For this project, references to the feeder main network will include the large diameter water mains.

D3.6 The purpose of this project is to undertake a high level risk assessment of the City's feeder main assets to generate overall asset-based risk scores. The risk matrix will be used by the City's Water and Waste Department (WWD) to prioritize future inspections of the feeder main assets.

D4. SCOPE OF SERVICES

D4.1 The Services required under this Contract shall consist of a feeder main risk assessment in accordance with the following:

(a) Project management;

- (b) Record information review;
- (c) Pipe loading review;
- (d) Risk matrix development;
- (e) Recommended condition assessment technology and costs, and
- (f) Summary report.

D4.2 The list of feeder mains is shown in Appendix A.

D4.3 The preliminary budget estimate for this project is \$100,000.00, which includes applicable taxes, but excludes the allowance for Underground Structures costs identified in B8.7.

D4.4 Project Management

D4.4.1 Describe methods to be used for quality control and to monitor and complete the project on time and within budget. Identify any programs, procedures, systems, or techniques used to demonstrate sophisticated levels of management, cost control or quality control normally used or proposed to be used for the project.

D4.4.2 The Consultant will be responsible to manage the project and report project status in accordance with the City's Project Management Manual and corresponding templates.

D4.4.3 Throughout the duration of the project, provide monthly project status reports (scope, schedule, and cost) as well as an earned value analysis summary. No invoices will be paid until these reports have been received and approved by the City's Project Manager.

D4.4.4 A maximum of 75% of the total fee for the "Project Management" task will be paid prior to the acceptance of the draft summary report. The remaining 25% of the payment will be made upon acceptance of the final summary report.

D4.5 Record Information Review

D4.5.1 The Consultant will review the relevant record information for the purpose of developing the risk matrix. Record information review will include, but is not limited to: record drawings, design specifications, design notes, pipe layout drawings, construction details, the feeder main book, feeder main and water main distribution maps, GIS data, and other documents that are available and relevant for the review.

(a) Due to the sensitive nature of the water distribution system, record information and GIS data will only be available to the Consultant, and subject to the City's GIS Data Agreement requirements.

(b) Proponents may request a sample of the record information in writing; this will be provided subject to the City's requirements.

D4.5.2 The record information will be reviewed to collect and inventory the feeder main location, size, diameter, material, age, etc., for the purpose of establishing the risk factor parameters for the probability and consequence of failure of each feeder main.

D4.5.3 75% of the total fee for the "Record Information Review" task will be made upon completion of the record information review. The remaining 25% of the payment will be made upon acceptance of the final summary report.

D4.6 Pipe Loading Review

D4.6.1 The Consultant will review the existing internal and external pipe loads.

(a) The internal pipe loads to be reviewed will include, but are not limited to: operating pressures, transient pressures, and system-wide pressures.

(b) The external pipe loads to be reviewed will include, but are not limited to: dead loads (soil), live loads (vehicular and rail traffic), and hydraulic loads (water table, river crossings, pipes in potential flood zones).

D4.6.2 75% of the total fee for the “Pipe Loading Review” task will be made upon completion of the pipe loading review. The remaining 25% of the payment will be made upon acceptance of the final summary report.

D4.7 Risk Matrix Development

D4.7.1 The Consultant will establish an overall failure risk score for each feeder main. This score will be derived from the combined probability of failure (PoF) score and the consequence of failure (CoF) score, and placed into a standard risk matrix.

- (a) The Consultant will initially identify parameters (such as pipe size, pipe material, etc.) that contribute to the overall PoF and the CoF scores. These parameters will be grouped into impact indices such as economic, operational, social, environmental, etc. All indices and parameters will be numerically ranked to meet the City’s need. The final PoF and CoF scores will be based on a total of 100 points each.
- (b) The Consultant will facilitate an interactive workshop for stakeholders to review and approve all indices, parameters, and their corresponding ranking scores. After the workshop, the Consultant will consolidate the results to create the final risk matrix.

D4.7.2 The PoF on any pipeline is better managed if the physical condition is known with greater certainty by means of condition assessment. However, in absence of condition assessment, the PoF parameters will be established based on record information, pipe characteristics, and expected embedment environment; these parameters may include but not be limited to; pipe material, diameter, expected soil conditions, and failure history, etc.

D4.7.3 75% of the total fee for the “Risk Matrix Development” task will be made upon completion of the risk matrix. The remaining 25% of the payment will be made upon acceptance of the final summary report.

D4.8 Recommended Condition Assessment Technology and Estimate

D4.8.1 Review available technologies and costs for assessing feeder mains and estimating remaining life. Make recommendations regarding applicability in Winnipeg including:

- (a) A list of high-priority assets to inspect,
- (b) An overall list of assets to inspect including their priorities from high to low,
- (c) A list of assets, if any, where inspections would not be worth undertaking and reasons why,
- (d) Non-destructive testing technologies – identify technologies, description, application, advantages, and limitations,
- (e) Provide an AACE Class 5 estimate for condition assessment of the feeder main network.

D4.8.2 75% of the total fee for the “Recommended Condition Assessment Technology and Estimate” task will be made upon acceptance of the draft summary report. The remaining 25% of the payment will be made upon acceptance of the final summary report.
