## 2022 ANNUAL WATER REPORT – CITY OF WINNIPEG WATER SUPPLY SYSTEM

### **INTRODUCTION**

---

The Mission of the City of Winnipeg's Water and Waste Department is to serve the community by providing and continually improving drinking water, wastewater, land drainage, and solid waste services to the citizens of Winnipeg.

The City of Winnipeg ensures that our drinking water is safe by using watershed protection measures, design and construction standards, multi-step water treatment, operator certification programs, standardized operating procedures, and a comprehensive source-to-tap monitoring program.

The Province of Manitoba and the Winnipeg Regional Health Authority regulate the quality of our drinking water using the *Manitoba Drinking Water Safety Act* and the *Guidelines for Canadian Drinking Water Quality*. The City of Winnipeg's Public Water System Operating Licence, PWS-09-412-02, requires that we regularly monitor the quality of our drinking water and submit an annual report to the regulating authority on or before the 31<sup>st</sup> of March of each year as set out in subsection 32(2) of *MR 40/2007, Drinking Water Safety Regulation*.

In keeping with this requirement, the City of Winnipeg has compiled this report, which summarizes the results of the City's 2022 Water Quality Monitoring Program.

## 1.0 DRINKING WATER SOURCE, TREATMENT, AND DISTRIBUTION

The City of Winnipeg gets its water from Shoal Lake, which is on the border between Manitoba and Ontario, and covers 277 square kilometers. The intake for the water system is only accessible by rail or boat. The water flows by gravity from the intake through a 135-kilometer-long aqueduct into four large reservoirs located adjacent to the Winnipeg Drinking Water Treatment Plant (WTP). The reservoirs can hold enough water to supply Winnipeg for approximately one month, depending on demand. The raw water is pumped from the reservoirs into the WTP, where it undergoes several steps of treatment to produce high quality drinking water:

1. Coagulation and flocculation: sulphuric acid and ferric sulphate are added to lower the pH of the water and cause particles of organic material to clump together.
2. Dissolved Air Floatation (DAF): tiny bubbles of air are used to remove the clumped organic material from the water.
3. Ozonation: gaseous ozone is added to kill bacteria, and then sodium bisulphite is added to remove excess ozone.
4. Filtration: the water flows through biologically activated carbon filters to remove any remaining small particles, including parasites.
5. Chlorination: chlorine, the most widely-used drinking water disinfectant in North America, is added to kill viruses and bacteria, and then sodium hydroxide is added to raise the pH back to the original level.
6. Ultraviolet (UV) Light: the water is disinfected by exposing it to UV light.
7. Orthophosphate is added to form a protective coating inside water pipes, which helps to reduce corrosion. Fluoride is added to prevent dental decay, as a part of the Provincial Water Fluoridation Program, which is overseen by Manitoba Health.

## 2022 ANNUAL WATER REPORT – CITY OF WINNIPEG WATER SUPPLY SYSTEM

In 2022, the WTP produced an average of 190 megalitres (ML) of high-quality drinking water per day. The water is pumped from the WTP to three smaller reservoirs and regional pumping stations in different areas of the City. The Wilkes Reservoir holds 252 ML and feeds water to the Hurst Regional Pumping Station; the McPhillips Reservoir holds 240 ML and feeds water to the McPhillips Regional Pumping Station; the Maclean Reservoir holds 222 ML and feeds water to the Maclean Regional Pumping Station. At the regional pumping stations, chlorine is added again before entering the distribution system, which is comprised of approximately: 2,717 km of water mains; 151 km of feeder mains; 30,319 valves; and 23,295 fire hydrants.

## **2.0 DRINKING WATER QUALITY STANDARDS AND TESTING**

---

The bacteriological, chemical, physical, and microbial drinking water quality standards that apply to the City of Winnipeg's Public Water System are listed in Operating Licence PWS-09-412-02<sup>1</sup>, issued by Environment and Climate, under the authority of the *Manitoba Drinking Water Safety Act*<sup>2</sup> and its associated Regulations: *MR 40/2007, Drinking Water Safety Regulation*<sup>3</sup> and *MR 41/2007, Drinking Water Quality Standards Regulation*<sup>4</sup>.

The required frequency of testing and testing locations are specified in PWS-09-412-02. We are required to test the raw water, treated water leaving the WTP, water leaving the three regional pumping stations, and at a minimum of 39 sites within the distribution system every week. Because water quality is so important, we exceed the minimum requirements by testing at 57 locations within the distribution system and by testing for additional parameters beyond the requirements of PWS-09-412-02.

The parameters tested are listed in Table 1 and summaries of the 2022 Water Quality results are provided in Appendix A.

### **3.0 COMPLIANCE AND CORRECTIVE ACTIONS SUMMARY**

---

The City of Winnipeg operates a comprehensive Water Quality Monitoring program that exceeds the requirements of PWS-09-412-02. We monitor the quality of our water from source to tap and respond to customer inquiries and complaints about water quality. We submit various compliance reports to our regulators: monthly reports detailing turbidity, chlorine, and UV results at the WTP; quarterly reports detailing fluoride, haloacetic acid (HAA), and trihalomethane (THM) levels in the distribution system; and an annual update on our Lead Testing Program. Weekly bacteriological results are sent directly to the Province of Manitoba's Office of Drinking Water (ODW) by the analytical laboratory that performs the testing.

Occasionally, test results do not meet a drinking water quality standard, or we fail to meet a licence requirement. In these cases, we notify the ODW and take corrective action to ensure our water remains safe. We will inform Winnipeg residents immediately if there is ever a water quality issue that could affect public health.

The presence of bacteria in a water sample could indicate a potential treatment failure or contamination after treatment. If bacteria are detected in a treated water sample from the WTP or in the distribution system we take immediate corrective actions, notify the ODW, and submit a Corrective Action Report (CAR). In 2022, total coliform and *E. coli* bacteria were not detected in any of the 212 samples from the WTP and not detected in 99.95% of the 5,978 samples from the distribution system.

We add chlorine to disinfect the water as it leaves the WTP, and again as it enters the distribution system from the three regional pumping stations, using continuous online analyzers to manage the chlorine dosing levels. Grab samples are used to confirm the accuracy of the analyzers and to confirm that appropriate levels of chlorine are maintained throughout the distribution system. We are required to maintain a free chlorine residual of 0.5 milligrams per litre (mg/L) in the water as it leaves the WTP and 0.1 mg/L at all points within the distribution system. If the free chlorine residual drops below these levels we take immediate corrective actions, notify the ODW, and submit a CAR. In 2022, 99.97% of the 3,109 grab samples collected by laboratory staff met the free chlorine requirements.

## 2022 ANNUAL WATER REPORT – CITY OF WINNIPEG WATER SUPPLY SYSTEM

Turbidity is a measurement of the cloudiness of water caused by small particles, which can reduce the effectiveness of disinfection. The turbidity of the water leaving the filters at the WTP is never to exceed 1.0 Nephelometric Turbidity Units (NTU) and not to exceed 0.3 NTU for more than 12 consecutive hours and/or more than 5% of readings per month on any operating filter. We continuously monitor the turbidity of the filter effluent using online analyzers, and confirm the accuracy of the analyzers using grab samples. If the turbidity rises above these levels we take immediate corrective actions, notify the ODW, and submit a CAR. In 2022, 100% of the 1,889 grab samples collected by lab staff for turbidity were at or below 0.3 NTU. There is no maximum allowable turbidity in the distribution system, however, we take corrective actions if turbidity greater than 1.0 NTU is measured. In 2022, turbidity measured less than 1.0 NTU in 99.68% of the 3,119 samples from the distribution system.

No drinking water safety orders were issued for the City of Winnipeg in 2022. No boil water advisories were issued by the ODW/WRHA in 2022, however, one self-managed boil water advisory was issued by the City of Winnipeg to residents in a localized area on August 14, 2022 following a 311 concern during a water main renewal in the area. The boil water advisory was subsequently rescinded on August 17, 2022, after two consecutive sets of re-samples taken 24 hours apart tested negative for total coliforms and *E. coli*. A CAR was not required for this incident. No charges were laid, pending, or disposed of for any offences against the City of Winnipeg in 2022.

A summary of the CARs submitted in 2022 is provided in Table 2; Compliance and Corrective action reports are provided in Appendix B.

## **4.0 LICENCES AND PERMITS**

The City of Winnipeg operates its public water system according to the requirements listed in PWS-09-402-02, which came into effect on December 1, 2020 and expires on November 30, 2025.

Approximately 18.6 km of water mains were added to the distribution system in 2022. All of the extensions conform to the City of Winnipeg's engineering standards and construction specifications, as such, the works were approved by the ODW as a minor alteration and a Permit to Construct or Alter a Public Water System was not required.

## **5.0 MAJOR EXPENSES**

In 2022, the City's major expenses relating to drinking water included:

- Renewal of 13.6 km of water mains at 35 locations in the City's water distribution system
- Rehabilitation of the Redwood/Kildonan Feeder main river crossing
- Gas detection safety upgrades at the Hurst and MacLean Regional Pumping Stations
- Programmable-Logic-Controller (PLC) upgrades at the Taché Booster Pumping Station
- Implementation of a Granular-Activated-Carbon (GAC) filter media capture system at the WTP
- Fire pump upgrades at the Shoal Lake Aqueduct Intake Facility
- HVAC equipment upgrades at the Deacon Chemical Feed Facility

## **6.0 ZEBRA MUSSELS**

Zebra mussels are an invasive mollusk which can negatively impact ecosystems as they compete with fish for food. Zebra mussels can also settle inside water intake pipes and impede water flow.

The City of Winnipeg monitors Shoal Lake and the WTP raw water reservoirs for both adult zebra mussels and zebra mussel larva (veligers) during open water season. In 2022, there was no evidence of adult or veliger zebra mussels observed in any of the samples. The 2022 Shoal Lake Adult and Veliger Zebra Mussel Monitoring Report (MB) is provided in Appendix C.

## **7.0 BACKFLOW PREVENTION AND CROSS CONNECTION CONTROL**

As required under PWS-09-412-02, the City of Winnipeg operates a Backflow Prevention and Cross-Connection Control Program, which is enforced under the Water By-law 2015/107. The program requires all moderate and severe hazard premises to install and maintain a premise isolation backflow prevention device on the incoming water line to prevent the backwards flow of water from the building into the distribution system. Existing and newly installed devices are inspected by Program staff to ensure they have been installed according to the Plumbing Code and that the device offers the required level of protection, which is dependent upon the type of activities that occur within the building.

In 2022, Program staff notified 335 building owners of the requirement to install premises isolation devices, conducted approximately 1,400 inspections, and tracked the testing and maintenance of over 18,000 backflow prevention devices.

## **8.0 CORROSION CONTROL AND LEAD TESTING PROGRAMS**

Although lead is not present in the water produced by the WTP, it can enter the water as it passes through a lead service line (the pipe that connects a building to the water main) and/or household plumbing systems that contain lead. Buildings constructed before 1950 may have a lead service line and those constructed before 1990 may have lead solder or brass plumbing fixtures. There are approximately 22,500 buildings with lead service lines in the City of Winnipeg.

The ODW regulates the City of Winnipeg's Corrosion Control and Lead Testing Programs under PWS-09-412-02. As part of our Corrosion Control Program, we add orthophosphate to the water as it leaves the WTP. Orthophosphate forms a coating inside water pipes which helps reduce corrosion that can allow lead to leach into water as it travels through the pipes. We also replace the City's portion of lead service lines (from the water main to the shut-off valve at the property line) when replacing water mains and notify building owners when this work is being done so they have the option to benefit from cost-savings achieved by replacing their portion of the service line (from the shut-off valve at the property line to the building) at the same time.

## 2022 ANNUAL WATER REPORT – CITY OF WINNIPEG WATER SUPPLY SYSTEM

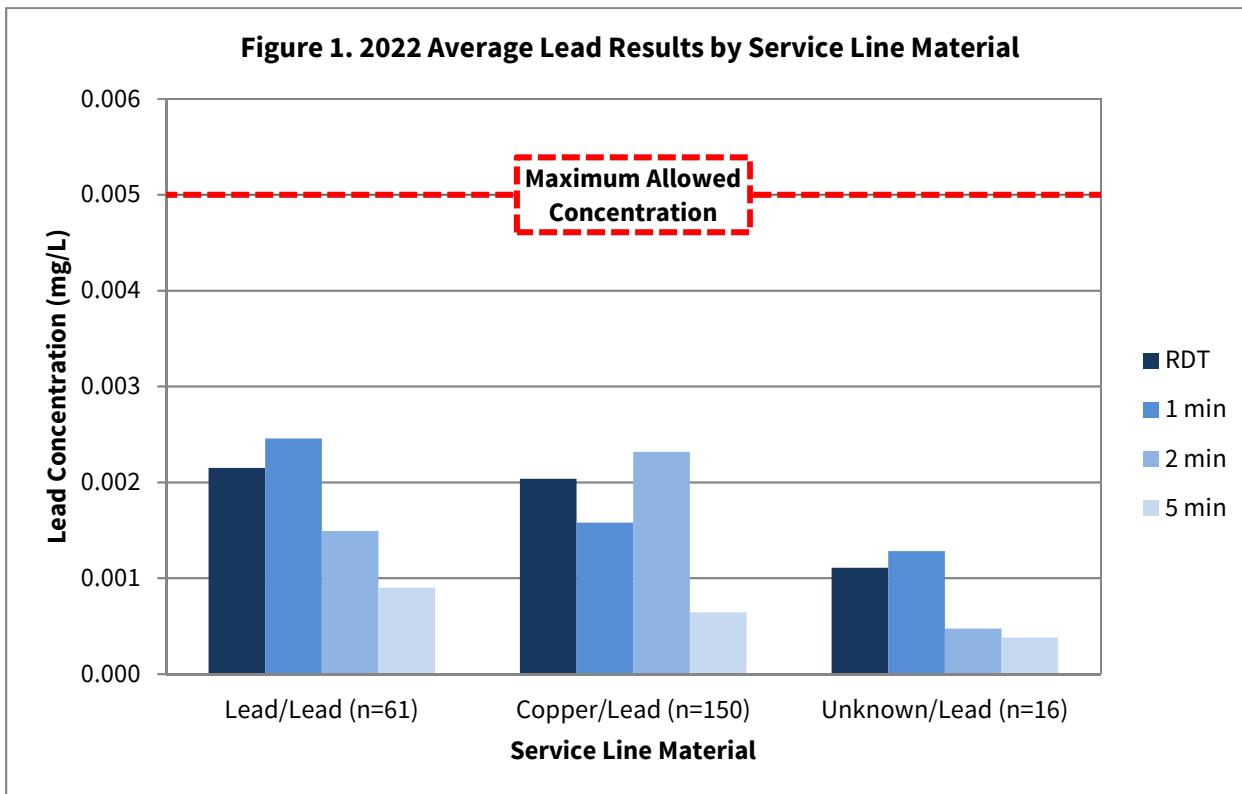

For the 2022 Lead Testing Program we analyzed 228 sets of samples collected from buildings with full lead (both the City and customer portions are lead) or partial lead (either the City or customer portion is lead) service lines. Sample sets consist of a Random Daytime Sample (RDT), and samples collected after 1, 2, and 5 minutes of flushing. The RDT sample is the best estimate of typical lead exposure within the building, while the sample collected after 1 minute of flushing is the water that was in the service line when the RDT sample was collected (depending on the distance of the sample tap from the service line). The samples collected after 2 and 5 minutes of flushing show the effect of flushing on lead levels at the tap.

Although 7% of the RDT and 1-minute flushed samples were over the guideline of 0.005 mg/L, lead levels decreased significantly with increased flushing. After five minutes of flushing, all but one sample were below the guideline. A summary of the results from the 2022 Lead Testing Program is provided in Table 3; results are provided in Appendix D.

**Table 3: 2022 Lead Testing Program Summary**

	Average (mg/L)	Minimum (mg/L)	Maximum (mg/L)	% of samples above guideline (0.005 mg/L)
<b>Random Daytime*</b>	0.00199	<0.000065	0.019805	7.02%
<b>1 minute</b>	0.00179	<0.000065	0.022734	7.46%
<b>2 minute</b>	0.00196	<0.000065	0.212160	2.63%
<b>5 minute</b>	0.00069	<0.000065	0.015299	0.44%

As shown in Figure 1, the average lead concentration in buildings with full lead service lines was higher than those with partial lead service lines. The average lead concentration was highest in the RDT and 1-minute flushed samples, but decreased significantly in the 2-minute and 5-minute flushed samples. Please note that one high result reported for a 2-minute flushed sample significantly affected the 2-minute flushed average for partial lead service lines. Overall, the results obtained from the 2022 Lead Monitoring Program were lower than those obtained in previous years, we will continue to monitor this trend.

\*one location excluded from chart due to unconfirmed lead connection

Customers are encouraged to remove lead from their plumbing systems whenever feasible. If this is not feasible, customers should flush the water until cold prior to drinking or preparing food or beverages, or use a point-of-use or pitcher-style filter that is certified for lead removal. If filters are used to remove lead it is important that they are properly maintained, as poor maintenance may increase the levels of lead in the water.

**RE: CORRECTIVE ACTION REPORT FOR WINNIPEG PUBLIC WATER SYSTEM, 252.00**

**Incident No:** CAR-02-2022

**Reported to ODW:** July 4, 2022

**Reported by:** Dan Merredew

**Approved by:** Dan Merredew, Water Treatment Plant Operations Supervisor

**Incident Date:** June 21, 2022 @ 8:57 am

**Incident Location:** Winnipeg 2-Treated (WTP)

**Incident Type:**

Low Disinfectant Residual Entering Distribution System (<0.5 mg/L free chlorine), 22(1) MR 40/2007

**Description of Incident and Corrective Actions:**

Water Treatment Plant Operator: on June 21, 2022 there was a scheduled Water Treatment Plant (WTP) shut down for maintenance work from 8:22 am until 10:35 am. The Branch 1 free chlorine analyzer read below 0.5mg/L from 8:57 am until 10:08 am, reaching a minimum of 0.37mg/L. From 8:57 am until 9:05 am (8 minutes), there was slight flow recorded through both the Branch 1 & 2 flow meters, as the Operators were charging the surge towers at the WTP to ensure adequate water was available for the service water pumps in the WTP building. It is estimated that approximately 0.056ML of water was sent to the Branch 1 surge tower during the 8-minute period when the free chlorine residual was below 0.5mg/L. This issue was not noted by Operators at the time because the WTP was offline. As a result, no additional testing was conducted at the time of the incident.

Due to the relatively small volume of water and the fact that the water is further boosted with chlorine at the In-town pumping stations, this event will not have impacted water quality.

**Incident No:** CAR-05-2022

**Reported to ODW:** August 22, 2022

**Reported by:** Dan Merredew, Water Treatment Operations Supervisor

**Approved by:** Dan Merredew, Water Treatment Operations Supervisor

**Incident Date:** August 22, 2022

**Incident Location:** Winnipeg 2-Treated (WTP)

**Incident Type:**

Water Entering Distribution System Exceeds Turbidity Standard, 6(1) MR 41/2007

**Description of Corrective Actions:**

On August 22, 2022, our instrument group performed maintenance on the Filter 5 analyzer, but they did not confirm that the instrument had been placed in calibration mode prior to flushing the sample line. While the sample line was being flushed, the turbidity reading spiked above 1.0 NTU, reaching a maximum of 5.0 NTU at 10:49. The recorded value was not a true indication of the water going through the filter. The ODW was immediately notified and the instrument group was reminded of the need to place the analyzer in calibration mode prior to maintenance.

**Approved by:** Courtney Diduck, Analytical Services Branch Head

**Incident Date:** November 23, 2022

**Incident Location:** Winnipeg 3-Dist (SE03)

**Incident Type:**

1. High Positive Total Coliform (>10 per100mL), 3 MR 41/2007
2. Low Disinfectant Residual in Distribution System, 22(1) MR 40/2007

**Description of Event:**

During routine monitoring, a high positive total coliform was reported at SE03. During the additional sampling conducted as part of the corrective actions to the high positive, a low chlorine residual was found at the downstream location, which is the last service connection before a dead end in the system.

**Corrective Actions:**

Environmental Standards:

IMMEDIATELY: Contacted the ODW and re-sampled original location as well as upstream and downstream for bacteria, turbidity, free/total chlorine, and temperature. Low chlorine residual was found at the downstream location; Water Services operators were dispatched to flush the affected area and ESD staff collected additional samples. Monitoring was terminated after two consecutive sets of re-samples taken 24 hours apart tested negative for bacteria, and chlorine levels were re-established in the area.

Water and Waste  
Eaux et déchets

Water Services & Engineering:

Responded to the low chlorine residuals found by ESD by spot flushing, running water to waste, and modelling the water quality data in the area.

Additional actions are being investigated and monitoring will continue until a long-term solution can be implemented.

#### Comments:

From March 17 at 10:00 am until March 29 at 12:50 pm pumps in the Deacon Booster Pumping Station were turned off and water flowed into the Branch aqueducts via gravity as part of a trial shut-down in preparation for planned system upgrades; fluoride dosing was suspended during the shut-down because there was insufficient pressure to maintain effective dosing.
